

Allegheny College Career Education and Department of Computer Science present

Landing Competitive Jobs and Internships with High Profile Companies

Ahmad Douglas
Allegheny College – Computer Science '02

WHAT'S THIS ALL ABOUT?

Seventeen years ago, I was in your shoes – a senior in Computer Science, stressing about my comp, having given some thought to the need to get a job after college, but maybe not with as much focus, discipline, and knowledge as I could have had.

I was super lucky. One of my roommates helped me to land an internship, and through hard work, good fortune, and the help of many others I've managed to progress and become a Senior Vice President at Equifax, helping them to recover from their widely publicized cybersecurity breach.

Now that I have experience in the career market, in hiring new employees and interns, I want to share with you advice that is tailored to Allegheny grads on how to compete and win at whatever career aspiration you might desire.

WHAT WILL I GET FROM YOUR TALK?

In the first half, we'll cover career preparedness – how to make your resume 'pop', advice on interviewing, and how to build / leverage your network to create opportunities.

In the second half, we'll cover the mindset of being passionate about your work, advice on how to find something you both love and the world needs, and why when you connect these points it's way easier to succeed.

ONE-ON-ONE CAREER COUNSELING SESSIONS AVAILABLE AFTERWARDS
